## Project Overview

This is a simple **User Management System** developed using **plain PHP (no frameworks)** and **MySQL**. It allows users to:

- **Register** with a username, email, password, and profile picture.
- **Log in and log out** securely using PHP sessions.
- **Edit their profile** (username, email, and profile picture).
- **Delete their account**, which also removes the associated profile picture.
- **Use "Remember Me" functionality** for persistent login.
- **Reset their password** via email.
